

Most reliable prilled fat.
Period.

MANUFACTURING | QUALITY CONTROL | SERVICE

Switching to Vital-ME® 160 provides proven flowability up to 160° F plus great handling and unwavering support from Provimi.

What is Vital-ME 160?

A concentrated source of metabolizable energy (ME) for lactating dairy cows. This dry, prilled fat is specially formulated to reach a melting point of 160° F for improved handling characteristics.

What makes it so reliable?

- Free-flowing and easy to handle.
- Effectively increases the energy density of diets.
- Highly palatable to livestock.
- Does not interfere with rumen fermentation.
- Will not contribute to milk fat depression.
- Backed by the technical support and customer service professionals at Provimi.
- New manufacturing facility was built in 2013 has lots of capacity to take on new orders.

How should I use Vital-ME 160?

- Add it to Total Mixed Rations (TMR), grain supplements or vitamin/mineral premixes to increase the energy density of the diet.
- Vital-ME 160 can also be topdressed at a feeding rate of up to 1 lb/cow/day. When topdressing a ration it is recommended to gradually increase the feeding rate over a period of one to two weeks.
- Consult with your nutritionist to find optimal feeding levels and get the best return on your investment.

Packaging Options:

F100212923 – 50 lb. bags
